

Report Center

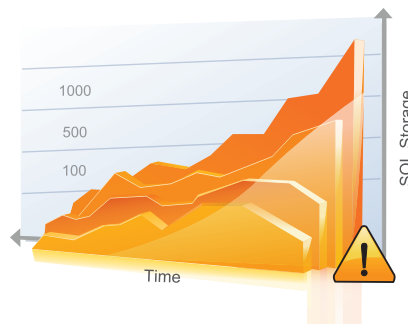

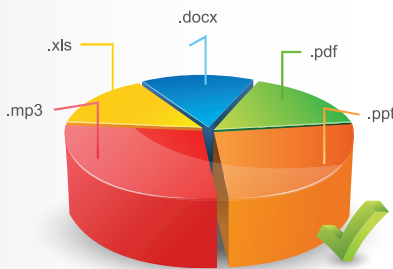

Migrate. Integrate. **Manage. Optimise.** Protect. **Report.**

Manage. Optimise. Report. Gain a comprehensive understanding of Microsoft® SharePoint® 2010 usage, topology, performance and storage trends to generate customisable reports and alerts.

Key Benefits

- Track, record and report upon every aspect of platform architecture, activity and process
- Leverage customisable graphical displays and customisable alerts to analyse trending and proactively respond to issues affecting platform performance
- Discern outliers with real-time, side-by-side difference reports and track platform performance by monitoring load times of SharePoint sites and other elements
- Monitor and analyse all DocAve infrastructure management processes, including disk space usage, job performance and topology

Create customisable, actionable reports to help promote proactive and intelligent SharePoint 2010 management.

One Dashboard: Comprehensive Platform Intelligence & Actionable Reporting

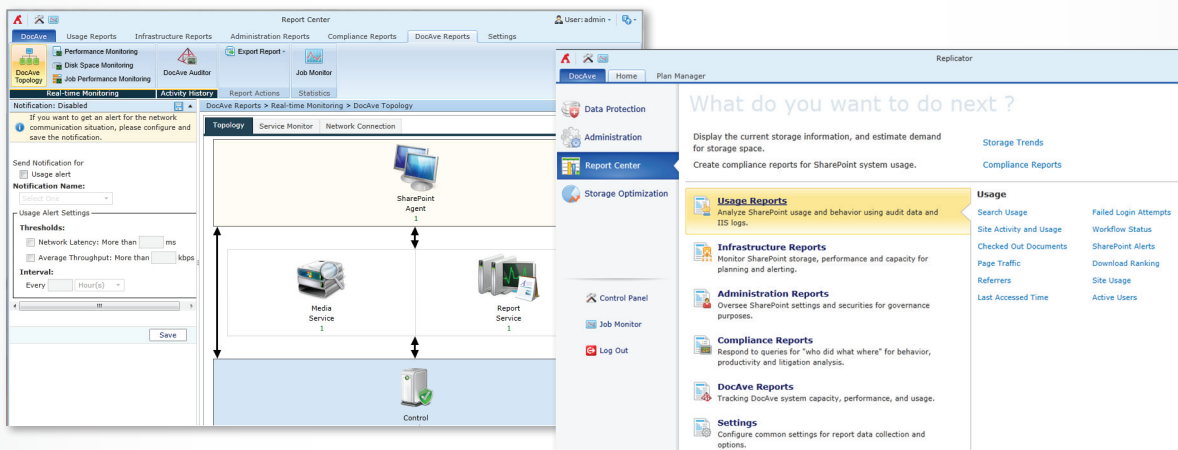

DocAve Report Center for SharePoint 2010 is the industry's most powerful and flexible SharePoint 2010 intelligence toolkit, providing single-pane access to a wide variety of mission-critical analytics. Administrators can gain a comprehensive understanding of their platform's topology, usage and performance trends and surface content- or user-centric reports for business owners. DocAve's configurable alerts and notifications based on customisable threshold triggers enable administrators and business owners to make proactive, intelligent management decisions.

Technical Overview

- Run real-time or scheduled reports to track SharePoint 2010 usage, performance, growth and health
- Monitor index status, network bandwidth usage, CPU and memory consumption and more – all from a single, customisable interface – and trend this data over time to discern optimal maintenance schedules
- Trend storage consumption for content databases, web applications and site collections, even for specific users to identify growth trends and improve capacity planning
- Gain insight into global SharePoint 2010 settings and security, including real-time difference reports to monitor governance policy compliance
- Leverage audit data to track and graphically display platform usage, user activity and vital analytics – including most frequently accessed content, active users, searched terms and page traffic
- Configure customisable alerts based on site or content load times, disk space capacity and CPU usage to proactively address potential performance issues in real-time
- Receive immediate notification if customisable thresholds for growth, usage, or activity are met to speed up response times for addressing performance concerns or non-compliant activity
- Track an item through its entire lifecycle to monitor heavily regulated content
- Audit all DocAve management actions to monitor administrators for policy compliance

Through DocAve's intuitive interface, featuring familiar ribbon-based controls and wizards for step-by-step guidance, build and maintain reports on vital SharePoint statistics.

As with all DocAve products, DocAve Report Center leverages only fully supported Microsoft methodologies and APIs.
